

Parkinson's is more than a physical disease

Learn about a clinical research study evaluating the effects of an investigational drug on cognitive function in participants with Mild Cognitive Impairment (MCI) due to Parkinson's disease.

About the PRECEDENT Study

In addition to movement symptoms, people with Parkinson's disease often have symptoms related to memory and thinking.¹ These symptoms may include difficulty planning, remembering, and staying on task, as well as trouble concentrating or finding the right words when talking. This is called mild cognitive impairment.

The PRECEDENT Study is evaluating the safety and efficacy of an investigational drug on cognitive function in participants with mild cognitive impairment due to Parkinson's disease.

Investigational drugs are not approved by a regulatory authority for any use, as the safety and efficacy have not been established.

How Do I Qualify?

You may be eligible to participate if you:

- Are 50 to 75 years old
- Have been diagnosed with Parkinson's disease
- Have mild cognitive impairment related to Parkinson's disease (The study doctor can evaluate you if you haven't been diagnosed.)

The study doctor will discuss additional eligibility requirements.

You may invite a caregiver (also referred to as a study partner) to attend study visits and help you complete study activities.

Your safety while participating is the highest priority. If you have questions or concerns at any point throughout the study, a study staff member is available. The study staff can also tell you about their specific COVID-19 safety protocols.

Your participation in the PRECEDENT Study is completely voluntary. If you decide to participate in this research study, you are free to withdraw at any time, for any reason, without any penalty or effect on your medical care. Talk to your doctor if you have any questions about Parkinson's disease or its symptoms.

If You Qualify and Decide to Participate:

- The study doctor will closely monitor you, your symptoms, and your overall health
- All study-related procedures and the investigational drug will be provided at no cost
- Transportation assistance may be available, if needed
